Pre Template Checklist

The following requirements apply for all installations:

☐ Sinks and all cutouts must be cut out in plywood sub-top. Important: save sink templates for visual inspection by Fox measurers.

☐ All upper & lower cabinets must be in alignment, level, and secured permanently in place.

☐ All cabinet end panels must be set in place.

☐ No plumbing fixtures (i.e. faucets) or plumbing installed.

☐ Under-mount sinks must be routed in place and flush to the top of the plywood sub-top & sinks must have 1/4” movement. Do not glue or permanently set sink in place.

☐ Overlay cabinets with 3/4” stone (total thickness of 1 1/2” with lamination) must have 5/8” plywood set on top of cabinet frame. Frameless cabinets with 1 3/16” or 3/4” stone (no lamination) must have 5/8” plywood sub-tops installed flush with top of cabinet frame (see “No Lamination & Farmhouse Sinks Pre-Template Checklist” for more details).*

☐ Ensure there is enough room for faucets and fixtures between sink cutout and backsplash.

For kitchens & farm sink installations, these additional requirements apply:

☐ Ranges must be on-site for visual inspection by Fox measurers.

☐ If receiving full height splash behind cook-top, hood must be properly set to attain proper measurement.
